

LegalEase

AI-Powered Legal Document Generator

Project Phases – Detailed Explanation

1. Brainstorming & Ideation Phase

This phase identifies the problem and develops the main idea for LegalEase.

- Identify the difficulty users face when preparing legal documents.
- Discuss the idea of an AI-powered legal document generator.
- Define the main purpose: generate structured documents from simple user inputs.
- Identify target users such as individuals, students and small businesses.
- Decide initial features such as document selection, AI generation, preview and download.

2. Requirement Analysis Phase

This phase determines what the LegalEase system must do and what resources it needs.

- Collect functional requirements: user input, document selection, AI processing, generation, editing and download.
- Collect non-functional requirements: usability, security, reliability, performance and responsiveness.
- Identify software requirements such as frontend, backend, database and AI/LLM service.
- Define user roles, input fields, outputs and error-handling requirements.

3. Project Design Phase

This phase converts the requirements into a clear system structure and workflow.

- Design the user interface and navigation.
- Design modules such as document selection, input form, AI generator, preview and download.
- Design the basic workflow: User → Select Document → Enter Details → AI Processing → Generate → Preview → Download.
- Design the database/API structure if storage or backend services are required.
- Prepare system architecture, flowcharts and module diagrams.

4. Project Planning Phase

This phase organizes the people, technologies, tasks and schedule required to complete LegalEase.

- Select technologies such as HTML/CSS/JavaScript or React for frontend.
- Select a suitable backend such as Python or Node.js.
- Plan database usage such as MongoDB if required.

- Plan AI/LLM API integration and document export.
- Prepare a timeline covering design, development, testing, documentation and demonstration.

5. Project Development Phase

This is the implementation phase where the planned LegalEase system is built.

- Create the project folder structure and development environment.
- Develop the frontend pages and forms.
- Implement document type selection and user input.
- Develop backend APIs and connect the AI/LLM service.
- Generate legal documents based on the supplied information.
- Add document preview, editing and download functionality.
- Connect the database when required.

6. Project Testing Phase

This phase checks whether LegalEase works correctly and handles different inputs safely.

- Test user input validation and required fields.
- Test document generation for different document types.
- Test AI/API communication and error handling.
- Test preview and download functions.
- Test frontend responsiveness on desktop and mobile screens.
- Fix bugs and repeat testing until the major functions work correctly.

7. Project Documentation Phase

This phase records the complete development process and project results.

- Prepare the abstract, introduction and problem statement.
- Document objectives, existing system and proposed system.
- Include requirements, system design, modules and technologies used.
- Document implementation, testing, screenshots and results.
- Include advantages, limitations, future enhancements, conclusion and references.

8. Project Demonstration Phase

This phase presents the working LegalEase project to the faculty or evaluation team.

- Introduce the LegalEase project and explain its objective.
- Open the application and demonstrate the main interface.

- Select a sample legal document type.
- Enter sample information and submit it.
- Show the AI-generated document and preview.
- Demonstrate editing and downloading the final document.
- Explain the project's key features, limitations and future enhancements.

Project Flow: Brainstorming → Requirements → Design → Planning → Development → Testing → Documentation → Demonstration

Project Objective: LegalEase aims to simplify the preparation of structured legal documents by using an AI-powered interface that converts user-provided information into a formatted document.

Note: LegalEase should be presented as a document-generation aid, not as a replacement for advice from a qualified legal professional.
