

Solution Requirements

Date	30 September 2026
Team ID	SWTID-2026-6449
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	4 Marks

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority
1	Authentication	Secure onboarding via Multi-Factor Authentication (MFA) and corporate single sign-on (SSO) to safeguard corporate entities.	High
2	Authorization levels	Role-Based Access Control (RBAC) separating platform managers, contract creators (clients), and corporate signees.	High
3	External interfaces	Integration with third-party LLM APIs (OpenAI/Anthropic) and external legislative legal databases for real-time compliance sync.	High
4	Transactions processing	Secure cryptographic document handling alongside standard payment portal integrations for subscription paywalls.	Medium
5	Reporting	User interactive analytics dashboard summarizing generated document logs, active signature pipelines, and template usage.	Medium
6	Business rules, etc.	Custom constraint enforcement pipelines preventing execution if mandatory compliance clauses (e.g. indemnity caps) are dropped.	High
7	Compliance to laws	Strict compliance metrics verifying data masking aligned with regional standards (GDPR, CCPA, and general data residency laws).	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The generative engine must rapidly parse raw questionnaire inputs and construct initial baseline contract files.	Document draft assembly completed in < 3.5 seconds.
2	Scalability	System infrastructure should dynamically manage surges during enterprise business operations without performance lag.	Capable of sustaining up to 5,000 parallel active sessions.
3	Security & Data Privacy	All client assets, parameters, and generated legal texts must be rendered unreadable to malicious network eavesdroppers.	End-to-end encryption leveraging AES-256 and TLS 1.3 standard protocols.
4	Reliability & Availability	Platform must guarantee round-the-clock structural utility for multi-national corporate teams.	99.95% continuous infrastructure availability matrix.
5	Usability & Accessibility	The questionnaire interface and workspace must follow global web usability standards for diverse user segments.	Full compliance with WCAG 2.2 AA accessibility guidelines.
