

Project Initialization & Planning Phase Report

Document Type	Project Proposal (Proposed Solution) Report
Date	15 March 2024
Team ID	SWTID-2026-6449
Project Name	LegalEase: AI-Powered Legal Document Generator
Maximum Marks	5 Marks

Project Overview & Problem Statement

Section	Details
Project Overview: Objective	To democratize legal access for startups and individuals by deploying advanced Large Language Models to generate tailored, legally binding contracts instantly through simple plain-language inputs.
Project Overview: Scope	Complete delivery of an interactive web-based wizard interface, an automated AI clause interpretation engine, regional regulatory compliance filtering, and an integrated electronic signature verification workspace.
Problem Statement: Description	Traditional legal drafting remains slow, expensive, and filled with dense jargon. This forces early-stage businesses to rely on risky, unverified internet templates or incur unsustainable legal fees.
Problem Statement: Impact	Automating this process removes legal friction, protects small businesses from hidden liabilities, accelerates vendor onboarding speeds, and saves thousands of dollars in early-stage operational capital.
Proposed Solution: Approach	Building an intelligent multi-turn wizard pipeline that maps conversational answers into verified legal templates, using an LLM reasoning backend to adapt every contract clause dynamically.
Proposed Solution: Key Features	• Plain-English Conversational Wizard: Collects user intent smoothly without using confusing legal jargon. • AI-Driven Clause Analysis Panel: Explains dense contractual obligations clearly to users in real time. • Cryptographic E-Sign Workspace: Enables legal execution, version tracking, and immutable document validation logs.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware: Computing Resources	Core Cloud Host Infrastructure	AWS EC2 / ECS computing tiers for web application traffic routing.
Hardware: Memory	Application Hosting Tiers	16 GB Allocation across elastic cluster nodes for fast microservice execution.

Hardware: Storage	Secure Datastore Engine	250 GB AWS RDS PostgreSQL managed database instance with automated daily backup chains.
Software: Frameworks	Backend & Frontend Frameworks	React.js for frontend interaction layers; FastAPI (Python) for core system APIs.
Software: Libraries	Processing & Client Stacks	langchain, openai, pydantic (Backend AI orchestration); Axios, TailwindCSS (Frontend layout).
Software: Development Env	Team Workspaces	VS Code, GitHub Repositories for collaborative code sharing.
Data: Data Source	Regulatory & Template Anchors	Structured datasets consisting of standard regional NDAs, commercial leases, and service level agreements.
