

Project Abstract & Overview

Project Title: LegalEase: AI-Powered Legal Document Generator

Date	30 September 2026
Team ID	SWTID-2026-6449
Team Size	4
Team Leader	M Mohammed Abdul Rahman
Team Members	Lingaraj S, Deepan, Sakthi
Maximum Marks	5 Marks

Project Description

LegalEase harnesses Generative AI to provide intelligent legal contract creation and automated clause interpretation. The platform includes a **Conversational Questionnaire Wizard** that simplifies the context gathering process, an **AI Clause Explainer** that provides plain-English summaries of complex contract rules to eliminate legal jargon, and an **Immutable E-Sign Workspace** to capture signature execution paths.

Utilizing advanced Large Language Models, LegalEase processes casual user text inputs to construct customized, jurisdiction-compliant contracts within seconds. Built using a robust microservices architecture, the application remains highly scalable and ensures data privacy through automated metadata sanitization routines.

Core User Scenarios

S.No	Target Scenario Description	Platform Operational Flow
1	A bootstrapping startup founder needs an immediate Mutual Non-Disclosure Agreement (NDA) with a casual contractor.	The system presents a conversational questionnaire, automatically flags local state compliance rules, and creates a tailored, binding contract draft.
2	A freelance developer requires an independent service contract with a formal corporate client.	LegalEase outputs professional-grade clauses with a value-driven narrative, and highlights payment liability thresholds in the side panel.
3	An independent vendor runs an immediate commercial agreement renewal that requires multi-party validation.	The system establishes unique verification tokens, prompts both parties via automated email links, and executes signature capture workflows.
